

NA'VI - ENGLISH DICTIONARY

TARONYU : RICHARD LITTAUER

Having been disappointed by the paucity of collated and collected data, I have worked all of the available sources I could find into one dictionary here. Thanks are certainly to be given to the following people for their monumental effort that preceded mine: Dr. Frommer, Karyu Amawey, Eywa mokriyä, and all of the guys on the IRC and Skype.

Where appropriate, extra notes have been included for the entries below. Compound non-inflected words and loan words from English have been noted. I have on several occasions derived non-attested root forms: these are marked by a *, and have two sources if not derived from a simple inflected form - take these with a grain of salt. I have also noted where words are specific to Pandora's ecology. The traditional Na'vi transcription in use by Frommer has been maintained throughout: the IPA transcription is given as well. Syllables have been marked in the IPA, and hopefully represent the syllabic structure of the language accurately. It would be best to ignore glottal stops near syllable boundaries, as they have been inconsistently marked on either side. Stress has been marked, but may well be erroneous. Where suitable, lenited words have been included. Many words found elsewhere are not included here, as all affixes and infixes have been avoided, unless their inclusion is deemed particularly useful. Forms that are inflected have been included if their uninflected form is not attested.

Bold indicates Na'vi word. *Italics* indicate English definition. Plain text indicates grammatical categorisation: parentheses indicate further notes. $-x-$ indicates ability to go on either side (not both simultaneously), while $\langle x \rangle$ represents an infix, where $t\langle 1 \rangle ar\langle 2 \rangle on$ are the positions.

Abbreviations:

\pm = can take male +an or female +e .	c.w. = compound word
$-$ = morpheme boundary	intj. = interjection
$+$ = leniting morpheme boundary	inter. = interrogative
$#$ = word boundary	n. = noun
$\langle \rangle$ = infix morpheme	num. = number
$'$ = stress [in IPA]	part. = particle
$'$ = ejective [in IPA]	prep. = preposition
$.$ = syllable boundary	pn. = pronoun
adj. = adjective	prop.n. = proper noun
adp. = adpositional affix	v. = verb
adv. = adverb	
conj. = conjunction	

For those of you wishing for an English - Na'vi dictionary, merely use Ctrl (or Apple) + F, and search away.
